Inverse-direct systems of modules

László Fuchs

Tulane University
`[fuchs@tulane.edu]`

Systems of modules are considered which are at the same time a direct and an inverse system. The results are concerned with the behavior of the limits when the connecting maps are modified by suitable automorphisms. Using non-standard uniserials, inverse systems with surjective connecting maps and with zero limit are constructed.

This is a joint work with R. Goebel and L. Salce.
