STRONGLY STARLIKE MAPPINGS OF ORDER $\alpha$
IN SEVERAL COMPLEX VARIABLES

Paula Curt

Abstract. In this paper we define the notion of a strongly starlike mapping of order $\alpha$ ($0 < \alpha \leq 1$) from $B^n$ into $C^n$. The definition is a generalization of D.A. Brannan's [2] notion of one dimensional strongly starlike functions. We show that strongly starlike mappings of order $\alpha$ from $B^n$ into $C^n$ are biholomorphic and we obtain a growth theorem for this new class of mappings.

Key words. Holomorphic maps, strongly starlike maps.
