Abstract. This paper is a survey on some recent multiplicity results, contained in [11], for a discrete boundary value problem involving the p-Laplacian via critical point theory. An overview on the abstract critical points results used to obtain them is also given.

Key Words and Phrases: Difference equations, critical point theory, nonlinear boundary value problems.

2000 Mathematics Subject Classification: 39A10, 35B38, 34B15.
