Abstract. We introduce a new concept of α-fuzzy $\mathcal{H}$-contractive mapping which is essentially weaker than the class of fuzzy contractive mapping and stronger than the concept of α-φ-fuzzy contractive mapping. For this type of contractions, the existence and uniqueness of fixed point in fuzzy M-complete metric spaces is also established.
Key Words and Phrases: Contractive mapping, fixed point, t-norm, fuzzy metric space, strong fuzzy metric space.
2010 Mathematics Subject Classification: 47H10, 54H25.

Conflicts of Interest. The authors declare that there is no conflicts of interest regarding the publication of this manuscript.
