Contents

1 Introduction to MATLAB **1**

1.1 Starting MATLAB and MATLAB Help 2
1.2 Calculator Mode 3
1.3 Matrices 6
1.3.1 Matrix generation 7
1.3.2 Indexing and colon operator 11
1.3.3 Matrix and array operations 13
1.3.4 Data analysis 16
1.3.5 Relational and Logical Operators 18
1.3.6 Sparse matrices 21
1.4 MATLAB Programming 23
1.4.1 Control flow 23
1.5 M files 25
1.5.1 Scripts and functions 25
1.5.2 Subfunctions, nested and anonymous functions 28
1.5.3 Passing a Function as an Argument 30
1.5.4 Advanced data structures 32
1.5.5 Variable Number of Arguments 37
1.5.6 Global variables 38
1.5.7 Recursive functions 39
1.5.8 Error control 40
1.6 Symbolic Math Toolboxes 41
Problems 48

2 MATLAB Graphics **51**

2.1 Two-Dimensional Graphics 51
2.1.1 Basic Plots 51

2.1.2 Axes and Annotation . . . 57
2.1.3 Multiple plots in a figure . . . 60
2.2 Three-Dimensional Graphics . . . 61
2.3 Handles and properties . . . 68
2.4 Saving and Exporting Graphs . . . 69
2.5 Application - Snail and Shell Surfaces . . . 70
Problems . . . 71

3 Errors and Floating Point Arithmetic **73**
3.1 Numerical Problems . . . 74
3.2 Error Measuring . . . 74
3.3 Propagated error . . . 75
3.4 Floating-Point Representation . . . 76
3.4.1 Parameters . . . 76
3.4.2 Cancelation . . . 78
3.5 IEEE Standard . . . 80
3.5.1 Special Quantities . . . 80
3.6 MATLAB Floating-Point Arithmetic . . . 81
3.7 The Condition of a Problem . . . 85
3.8 The Condition of an algorithm . . . 87
3.9 Overall error . . . 88
3.10 Ill-Conditioned Problems and Ill-Posed Problems . . . 89
3.11 Stability . . . 90
3.11.1 Asymptotical notations . . . 90
3.11.2 Accuracy and stability . . . 91
3.11.3 Backward Error Analysis . . . 93
3.12 Applications . . . 93
3.12.1 Inverting the hyperbolic cosine . . . 93
3.12.2 Conditioning of a root of a polynomial equation . . . 95
Problems . . . 98

4 Numerical Solution of Linear Algebraic Systems **101**
4.1 Notions of Matrix Analysis . . . 101
4.2 Condition of a linear system . . . 107
4.3 Gaussian Elimination . . . 111
4.4 Factorization based methods . . . 115
4.4.1 LU decomposition . . . 115
4.4.2 LUP decomposition . . . 116
4.4.3 Cholesky factorization . . . 119
4.4.4 QR decomposition . . . 121
4.5 Strassen's algorithm for matrix multiplication . . . 124
4.6 Solution of Algebraic Linear Systems in MATLAB . . . 126
4.6.1 Square systems . . . 126
4.6.2 Overdetermined systems . . . 127
4.6.3 Underdetermined systems . . . 128

4.6.4 LU and Cholesky factorizations . . . 129
4.6.5 QR factorization . . . 131
4.6.6 The `linsolve` function . . . 133
4.7 Iterative refinement . . . 134
4.8 Iterative solution of Linear Algebraic Systems . . . 135
4.9 Applications . . . 141
4.9.1 The finite difference method for linear two-points boundary value problem . . . 141
4.9.2 Computing a plane truss . . . 145
Problems . . . 147

5 Function Approximation **151**
5.1 Least Squares approximation . . . 154
5.1.1 Inner products . . . 154
5.1.2 The normal equations . . . 155
5.1.3 Least squares error; convergence . . . 158
5.2 Examples of orthogonal systems . . . 160
5.3 Examples of orthogonal polynomials . . . 163
5.3.1 Legendre polynomials . . . 163
5.3.2 First kind Chebyshev polynomials . . . 167
5.3.3 Second kind Chebyshev polynomials . . . 173
5.3.4 Laguerre polynomials . . . 174
5.3.5 Hermite polynomials . . . 174
5.3.6 Jacobi polynomials . . . 174
5.3.7 A MATLAB example . . . 175
5.4 Polynomials and data fitting in MATLAB . . . 177
5.4.1 An application — Census Data . . . 183
5.5 The Space $H^n[a, b]$ . . . 184
5.6 Polynomial Interpolation . . . 187
5.6.1 Lagrange interpolation . . . 188
5.6.2 Hermite Interpolation . . . 192
5.6.3 Interpolation error . . . 195
5.7 Efficient Computation of Interpolation Polynomials . . . 199
5.7.1 Aitken-type methods . . . 199
5.7.2 Divided difference method . . . 201
5.7.3 Multiple nodes divided differences . . . 205
5.8 Convergence of polynomial interpolation . . . 208
5.9 Spline Interpolation . . . 211
5.9.1 Interpolation by cubic splines . . . 213
5.9.2 Minimality properties of cubic spline interpolants . . . 217
5.10 Interpolation in MATLAB . . . 219
5.11 Applications . . . 224
5.11.1 Spline and sewing machines . . . 224
5.11.2 A membrane deflection problem . . . 225
Problems . . . 227

6 Linear Functional Approximation **231**
6.1 Introduction . . . 231
6.1.1 Method of interpolation . . . 234
6.1.2 Method of undetermined coefficients . . . 234
6.2 Numerical Differentiation . . . 235
6.3 Numerical Integration . . . 236
6.3.1 The composite trapezoidal and Simpson's rule . . . 237
6.3.2 Weighted Newton-Cotes and Gauss formulae . . . 242
6.3.3 Properties of Gaussian quadrature rules . . . 245
6.4 Adaptive Quadratures . . . 251
6.5 Iterated Quadratures. Romberg Method . . . 252
6.6 Adaptive Quadratures II . . . 257
6.7 Numerical Integration in MATLAB . . . 258
6.8 Applications . . . 262
6.8.1 Computation of an ellipsoid surface . . . 262
6.8.2 Computation of the wind action on a sailboat mast . . . 264
Problems . . . 265

7 Numerical Solution of Nonlinear Equations **269**
7.1 Nonlinear Equations . . . 269
7.2 Iterations, Convergence, and Efficiency . . . 270
7.3 Sturm Sequences Method . . . 272
7.4 Method of False Position . . . 274
7.5 Secant Method . . . 277
7.6 Newton's method . . . 279
7.7 Fixed Point Iteration . . . 285
7.8 Newton's Method for Multiple zeros . . . 286
7.9 Algebraic Equations . . . 287
7.10 Newton's method for systems of nonlinear equations . . . 288
7.11 Quasi-Newton Methods . . . 291
7.11.1 Linear Interpolation . . . 292
7.11.2 Modification Method . . . 293
7.12 Nonlinear Equations in MATLAB . . . 296
7.13 Applications . . . 299
7.13.1 Analysis of the state equation of a real gas . . . 299
7.13.2 Nonlinear heat transfer in a wire . . . 301
Problems . . . 302

8 Eigenvalues and Eigenvectors **305**
8.1 Eigenvalues and Polynomial Roots . . . 305
8.2 Basic Terminology and Schur Decomposition . . . 306
8.3 Vector Iteration . . . 310
8.4 QR Method – the Theory . . . 312
8.5 QR Method – the Practice . . . 316
8.5.1 Classical QR method . . . 316

8.5.2 Spectral shift . . . 321
8.5.3 Double shift QR method . . . 324
8.6 Eigenvalues and Eigenvectors in MATLAB . . . 326
8.7 Applications . . . 332
8.7.1 Solving mass-spring systems . . . 332
8.7.2 Computing natural frequencies of a rectangular membrane . . . 335
Problems . . . 338

9 Numerical Solution of Ordinary Differential Equations 341
9.1 Differential Equations . . . 341
9.2 Numerical Methods . . . 343
9.3 Local Description of One-Step Methods . . . 343
9.4 Examples of One-Step Methods . . . 345
9.4.1 Euler's method . . . 345
9.4.2 Method of Taylor expansion . . . 346
9.4.3 Improved Euler methods . . . 347
9.5 Runge-Kutta Methods . . . 349
9.6 Global Description of One-Step Methods . . . 355
9.6.1 Stability . . . 356
9.6.2 Convergence . . . 359
9.6.3 Asymptotics of global error . . . 360
9.7 Error Monitoring and Step Control . . . 362
9.7.1 Estimation of global error . . . 362
9.7.2 Truncation error estimates . . . 364
9.7.3 Step control . . . 367
9.8 ODEs in MATLAB . . . 376
9.8.1 Solvers . . . 376
9.8.2 Nonstiff examples . . . 377
9.8.3 Options . . . 380
9.8.4 Stiff equations . . . 382
9.8.5 Event handling . . . 390
9.8.6 `deval` and `odextend` . . . 396
9.8.7 Implicit equations . . . 397
9.9 Applications . . . 398
9.9.1 The restricted three-body problem . . . 398
9.9.2 Motion of a projectile . . . 402
Problems . . . 404

10 Multivariate Approximation 413
10.1 Interpolation in Higher Dimensions . . . 413
10.1.1 Interpolation problem . . . 413
10.1.2 Cartesian product and grid . . . 413
10.1.3 Boolean sum and tensor product . . . 415
10.1.4 Geometry . . . 418
10.1.5 A Newtonian scheme . . . 423

10.1.6 Shepard interpolation 425
10.1.7 Triangulation 430
10.1.8 Moving least squares 432
10.1.9 Interpolation by radial basis functions 434
10.2 Multivariate Numerical Integration 437
10.3 Multivariate Approximations in MATLAB 442
10.3.1 Multivariate interpolation in MATLAB 442
10.3.2 Computing double integrals in MATLAB 445
Problems 448
